Renovation of Naraneeya Teertham is in the final stages. See the work in progress through pictures.

*Spreading of sand – ½ feet throughout the Teertham base for better maintenance*

*Good fresh water is brought through a tanker for construction work as the local water is saline*
Transportation of good quality stones for constructing the wall

Construction of Parapet wall is on ...
Recycling – old stones and debris brought to the site from road side

Goats too are coming for inspection as the water body is going to be useful to them
Slowly and gradually the water body in two compartments taking the shape of Naraneeya Teertham.
Another example of recycling of material - Huge paver blocks used for ramp

Installation of eight Naga idols in different corners of the Traditional water body
